

BENCH INTERNATIONAL

Position Announcement

Vice President of Bioinformatics U.S.-based Biotechnology Company

A cutting-edge biotechnology company located in the Northeast U.S has exclusively retained Bench International, an internationally known and respected executive search firm. This organization is a publicly held, fully integrated genomic company pioneering the systematic application of genomics to accelerate the discovery and development of therapeutic and agricultural products. Its genomic technologies, processes and information systems are designed to generate rapidly comprehensive information about gene expression, biological pathways and potential drugs that affect these pathways. The location of the company puts it near one of the world's top technology-driven markets with superior educational, research, financing, and commercialization resources in close proximity.

The Vice President of Bioinformatics will report to the CEO and have the unique opportunity to influence the future direction of the organization as it continues to grow. Responsibilities include developing and implementing corporate collaborations and partnerships with major pharmaceuticals, biopharmaceuticals and agricultural companies that center on partners-specific disease models or biological systems; providing leadership to a large group and interacting with cross-functional groups throughout the organization including Business Development, Research and Development, Operations and Finance.

The successful candidate will have 10+ years senior level experience in the software industry with extensive experience on large database-backed web applications, workflow application development, Java, C++, RDBMS, CORBA and commercial software product lifecycle management with a BS/BA in a related discipline, such as computer science. Advanced degree (MBA or PhD) is preferred. Excellent interpersonal, advocacy, delegation and communication skills with a strong orientation to effective teamwork, and sound analytical competence and business acumen to make quality judgments regarding feasibility of collaborative opportunities is also required.
